

TUFFLEX[®]

A Unique, Fast-Curing, Protective and Decorative Resilient
Waterproofing System

Failed concrete deck due to freeze-thaw cycle

Rebuilt, re-bonded & protected by TUFFLEX Membrane Systems

Waterproofing of roofs, decks, walkways, rooftop parking surfaces, ski area walkways, etc., is a MAJOR problem in construction today. Approximately 80% of litigation in new and remedial construction today involves water leaks!

*Ski resort decks—
safe from leaks and ski boots!*

Because of a technological breakthrough in urethane rubber formulation by our chemists, **TUFFLEX** is able to offer a new, honestly unique answer to this age old problem.

New and remedial surfaces can be overlaid with our tough, flexible and reliably waterproof surfacing systems, often in only one trip to the job site. This contrasts to the several trips required by other systems. Labor and travel time is a savings that contractors pass on to their customers.

- Unique seamless "membrane" systems.
- Renewable manufacturer's warranty.
- Safe, slip-resistant finishes.
- Foot traffic within hours of installation.
- Tough final color coat is U.V. resistant.
- Freeze-thaw cycle protection.
- Factory licensed approved applicators.
- Class "A" or "B" fine-rated on plywood!
- Can provide for proper drainage.

Ski areas represent the worst combination of weather extremes and "ski boot" foot traffic.

Imagine how well **TUFFLEX** performs in more temperate conditions!

TUFFLEX® SYSTEMS CHARACTERISTICS

Since 1985, **TUFFLEX Inc.** has developed, improved and added products and pioneered their application techniques, ideas and uses with the goal of maintaining our leadership in the flexible coating market.

From waterproofing and protecting hard usage ski resort decks exposed to extreme temperature fluctuations to coating and sanitizing animal habitats with our cushioned and seamless solvent-free Mono-Mat System, no other company has the background and experience that **TUFFLEX Inc.** brings to the flexible coating market.

The wide ranging versatility and performance advantages that **TUFFLEX Materials and Systems** represent are only briefly described below:

WATERPROOF: **TUFFLEX** is seamless and dependably waterproof. The unique flexibility allows total adherence to its substrate, with no slip-sheet required.

WEATHER-RESISTANT: Resistant to cycles of freeze-thaw, extremes of thermal shock, substrate expansion and contraction, ozone and the ultra-violet and infra-red rays of sunlight.

TOUGH: Has been successfully used on motor vehicle decks and ramps, on veterinary floors, on ski-lodge sundecks and where spiked golf shoes are worn.

REPAIRABLE: **TUFFLEX** adheres tenaciously to itself through a molecular interlock so that repairs are easily and permanently made.

SLIP-RESISTANT: Surface texture can be varied to give the desired slip-resistance.

SOLVENT-FREE SYSTEMS: **TUFFLEX** Systems include solvent-free materials with no VOC restrictions that for the first time, provide interior applications or use in and around occupied areas without special precautions.

ATTRACTIVE: **TUFFLEX** Systems are available in a variety of colors and surface finishes.

USAGES: Any place where a hard-usage surface is wanted, but leakage is not, such as: residential sundeck, motel and apartment walkways, rooftop play areas, wood, metal, aluminum and fiberglass boat and ship decks, athletic room floors, golf course locker room floors, pool decks and veterinary areas.
